

BlueBox Funds- BlueBox Global Technology Fund

Direct Connection

This is a marketing communication. Please refer to the Prospectus and KID of the Fund for more information on general terms, risks, and fees. Investors should only invest in the Fund once they have reviewed the Prospectus and KID before making any final investment decisions.

Investment Theme—Direct Connection

The Direct Connection of computers to the real world has enabled the technology revolution of the past 15 years, driving an acceleration in tech adoption simultaneously across all industry verticals. With every other industry investing its excess returns in technology, we expect the IT sector to continue to outperform the broader market as it steals the growth from the rest of the economy. The Fund focuses on the companies enabling Direct Connection, giving it exposure to the most exciting developments in the sector without needing to chase over-hyped themes or invest in over-valued stocks.

BlueBox Global Technology Fund Performance

Performance to 29.02.2024	1 month	3 months	YTD	3 yr Ann	5 yr Ann	ITD Ann
BlueBox Global Technology Fund	7.8 %	20.2 %	12.4 %	12.8 %	24.6 %	20.9 %

¹ Performance based on Share Class S since launch 29.03.2018 (ISIN LU1793347128); ² S&P Global BMI IT INDEX is Net Total Return, calculated since launch of BBGT on 29.03.2018

The fund performance is **not** measured against the benchmark. This is for information purposes only. Performance is of a USD share class, on net of fees basis, with gross income reinvested. Source: at 29/02/24. **Past performance does not predict future returns.** Performance related data will display only where relevant to the share class inception date. The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested.

Equity Risk: The risk that investments depreciate because of stock market dynamics.

Market Risk: The Fund's assets may decrease because of sovereign acts and political transformation, which may also influence free trade of currency. In addition, risks may arise because of restricted information possibilities in addition to less stringent supervision and control of certain markets. The performance of these markets may be subject to significant volatility. The concentration of the Fund on a given country implies the risk that the events concerning the given country may significantly and negatively affect the value of the whole portfolio of the Fund*.

Risk Indicator*

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

*PRIIPs SRI

Medium-high risk class. This rates the potential losses from future performance at a medium-high level, and poor market conditions will likely impact our capacity to pay you.

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. You may not be able to cash in early. You may not be able to sell your product easily or you may have to sell at a price that significantly impacts on how much you get back.

Be aware of currency risk. In some circumstances, you may receive payments in a different currency, so the final return you will get may depend on the exchange rate between the two currencies. This risk is not considered in the indicator. A complete description of risk factors is set out in the Prospectus in the section entitled 'Risk Factors Annex'.

William de Gale's Monthly Comment

Tolstoy's novel Anna Karenina starts with the sentence "Happy families are all alike; every unhappy family is unhappy in its own way" and it could be said that February was an Anna Karenina month for us: 7 of the top 8 performers in the BlueBox Global Technology Fund were up for same reason, whereas each of the laggards lagged in its own way. NVIDIA, the bellwether of GenAI, reported yet another astounding quarter, indicating further rapid growth in AI spend, and everything else chip-related followed, sending the fund up 7.8% over the month and 12.4% year-to-date, comfortably ahead of the benchmark.

The leaders included Tokyo Electron (+29%), NVIDIA (+29%), Applied Materials (+23%), Monolithic Power (+19%) and Advanced Micro Devices (+15%), all semiconductor equipment or design companies benefiting from excitement around GenAI spend. The exception was Trimble (+20%), which had a quarter that was better than feared, but which isn't an obvious GenAI winner.

The underperformers were Amadeus (-17%), which is suffering travel cancellations due to Middle-Eastern tensions; Adobe (-9%), down on concerns that GenAI point-products threaten its dominance; and MercadoLibre (-7%), with a large one-off hit to income as a result of a cross-border tax issue.

We are keeping a close eye on Amadeus, but we aren't overly concerned about the other two.

Maybe I am being too optimistic, but there seem to be signs that professional investors are finally beginning to capitulate and buy into a tech recovery that appears until now to have been driven largely by retail investors excited by GenAI. If that is the case, the biggest risk currently would not be a tech collapse, but a melt-up, as a lot of money suddenly moves into the sector from the sidelines, where it has been hiding for the past two years.

Whatever the short-term gyrations of market sentiment, in the real world vast sums are being spent not just on GenAI, but across the full spectrum of technology, as companies develop and deploy successive rounds of tech-driven disruption in every walk of life, enabled by the Direct Connection of systems to the real world. Technology enablers continue to be the main beneficiaries, stealing almost all the profit growth from the rest of the market, as they have done since 2007. These very profitable enablers remain the main engine of profit growth globally, giving BlueBox investors exposure to the strongest technology trends, without the absurd valuations and poor business models of many of the high-profile, but profitless, disrupters.

Information about the risk involved in the fund, including Risk Category, Equity Risk, and Market Risk can be found within the Prospectus of BlueBox Funds, in the 'Risk Factors Annex'. The base currency of the fund is USD, therefore returns on non-USD share classes will be affected by exchange rate movement. Fees and charges will reduce the return on your investment and will be affected by exchange rate fluctuations for USD against EUR, GBP and CHF. The Prospectus and the appropriate KID / KIID for the share class should be consulted to obtain further details on risk, fees, and general terms before making any final investment decisions, which should take into account all the characteristics or objectives of the Fund as described. The Prospectus and KIDs / KIIDs, as well as the latest annual and semi-annual reports, can be found at www.blueboxfunds.com, or obtained free of charge from Funds Avenue S.A. 49, boulevard Prince Henri, Luxembourg, and from all distributors.

Funds Avenue S.A. may decide to terminate the arrangements made for the marketing of the Fund in all or a particular country. A summary of the investors' rights is available in English at <https://fundsavenue.com/policies/>.

The Morningstar Rating TM for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. BlueBox Global Technology Fund was rated against the following numbers of Technology Equity funds over the following time periods: 1,007 funds in the last three years, 613 funds in the last five years. Past performance is no guarantee of future results.

The Morningstar® Sustainability Rating TM is intended to measure how well the issuing companies or countries of the securities within a fund's portfolio are managing their financially material environmental, social and governance, or ESG, risks relative to the fund's Morningstar Global Category peers. Morningstar assigns Sustainability Ratings by combining a portfolio's Corporate Sustainability Rating and Sovereign Sustainability Rating proportional to the relative weight of the (long only) corporate and sovereign positions.

The charges are the fees the Fund charges to investors to cover the costs of running the Fund. Additional costs, including transaction fees, will also be incurred. These costs are paid out by the Fund, which will impact on the overall return of the Fund. Fund charges will be incurred in multiple currencies, meaning that payments may increase or decrease as a result of currency exchange fluctuations.

The Ongoing Charges Figure (OCF) is an amount representing all operating charges and expenses of the Fund in the prior 12 months as a percentage of the Fund's average net assets for the period. Where that figure would not be a fair representation of future costs or if 12 months data is not available, an estimated figure will be shown.
