Key Benefits

- Designed to outperform its benchmarks and global equities by systematically managing the risk and equity holdings in the portfolio across the business cycle
- Shifts its assets from equities to fixed income asset classes when the outlook deteriorates
- Uses algorithms based on behavioral finance to secure consistency, objectivity, and speed in making allocation decisions
- Can be tailored to individual client and business needs
- Has outperformed MSCI World equity markets on 3, 5 and 10-year horizons

The way to have global equity in different economic cycles. From 0% to 100% global equity exposure

Investment Strategy

ACCI Dynamic - SA is a systematically managed multi asset portfolio dynamically shifting its equity allocation from zero to 100%. The aim and aspiration of the portfolio is long term total return, specified as outperforming a balance benchmark with 67% equities and 33% bonds on a 3-year horizon and to outperform MSCI world across the full business cycle, typically 5-7 years. By systematically reducing the equity weight when the outlook for financial markets deteriorates, we seek to limit volatility and drawdowns and thereby have higher starting points for building asset values when equity markets resume their upwards trend. 2008, 2010, 2011 and 2015-16 are recent examples.

Asset Allocation

ACCI Dynamic – SA will be holding close to 100% in equities most of the time. However, when the market outlook deteriorates, this equity allocation will be reduced to 60% and, in cases of a very negative outlook, further to zero. When Equities are reduced, the balance of the portfolio is invested in fixed income instruments.
