Key Benefits

► Globally diversified exposure to the full credit spectrum of emerging- and developed market bonds

► Diversification across duration in investment grade and sub-investment grade asset classes

► Continuous review and adjustments of asset class weights to match central bank policy outlook

► Systematic management of both duration exposure and credit risk exposure, via significant alpha-creating allocation shifts between sub-asset classes

► Solid total return from the core diversified portfolio and additional performance from the systematic allocation process

A global fixed income portfolio creating performance while managing risk in a low rate environment. Fully invested in global fixed income

Investment Strategy

In line with declining yields, tightening credit spreads, a maturing credit cycle and increasing risk of higher interest rates, the need for diversification in fixed income portfolios has increased. To address this need we propose ACCI – Dynamic Global Fixed Income Opportunities portfolio (GFO). These portfolios provide fixed income investors with diversification across credit quality, geographical regions and duration. To perform and limit volatility and drawdowns, we propose solutions for systematic and dynamic management of credit risk and duration in response to changes to the financial outlook.

Asset Allocation

We propose to actively manage the portfolio’s risk level, by moving the portfolio allocation from safe and stable bonds to more risky credit, in line with the changing outlook of financial markets. There are three different portfolios: “Defensive”, “Balanced” and “Positive”, which match with a negative, stable and positive outlook of the market, respectively. The total portfolios are fully invested in ETFs.
