What is this product?

Type

The product is a unit of the sub-fund TATA India Equity Fund (the sub-fund of Multipartner SICAV (the "Umbrella Fund"), a "société d'investissement à capital variable" (SICAV) and is authorised as an undertaking for collective investment in transferable securities (UCITS) in accordance with Part I of the Law of 17 December 2010 on undertakings for collective investment (the "Law of 2010").

Term

The Fund has no maturity date. The Fund could be closed under the conditions set down in the current prospectus of the Fund.

Objectives

Investment Objective

The sub-fund invests in the following instruments:

- direct investments in equities and other shares of companies listed on an exchange in India; up to 100% of the sub-fund's assets.
- ADRs (American depositary receipts) and GDRs (global depositary receipts) of companies located in India. ADRs and GDRs must comply with the provisions in Article 41 of the Law of 2010 and must not contain any embedded derivatives. The sub-fund may use derivative financial instruments (derivatives) solely for currency hedging purposes. The range of possible instruments also includes currency forward contracts.

Investment Policy

Investments in India may be made through the acquisition of equities listed on an exchange in India or of equity-based products, in particular ADRs (American depositary receipts), GDRs (global depositary receipts), P-notes (participatory notes), exchange-traded funds (ETFs) and other investment funds that meet the criteria of eligible assets pursuant to Article 44 of the Law of 2010. P-notes are instruments that are issued by financial institutions and offer exposure to the underlying securities. These are eligible as investments for the sub-fund, provided they meet all legal and contractual criteria. Depending on the nature of the investment, P-notes are classified as either certificates or warrants/options.

The Fund is actively managed with reference to the MSCI India Index (the "benchmark") by virtue of the fact that it uses the latter in the appropriate currency for performance comparison purposes. However, the benchmark is not used to determine the Fund's portfolio composition or as a performance target, and the Fund can only be invested in securities that are not represented in the benchmark.

The sub-fund may use derivative financial instruments (derivatives) solely for currency hedging purposes.

The sub-fund's assets are mainly invested directly in shares.

What are the risks and what could I get in return?

Risk Indicator

Lower risk

Higher risk

The risk indicator assumes you keep the product for 7 years.

The actual risk can vary significantly if you cash in at an early stage and you may get back less.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact our capacity to pay you.

Be aware of currency risk. If you choose a foreign currency share class you will be exposed to currency risk and your final return will depend on the exchange rate between the foreign currency and your local currency. The risk is not considered in the indicator shown above.

You can find more information about the other risks in the prospectus at www.carnegroup.com.

This product does not include any protection from future market performance so you could lose some or all of your investment.

Performance Scenarios

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the product and the suitable benchmark over the last 12 years. Markets could develop very differently in the future.

What happens if Carne Global Fund Managers (Luxembourg) S.A. is unable to pay out?

The assets and liabilities of the Sub-fund are segregated from those of the other sub-funds and from those of the manufacturer or the custodian. What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

Costs over Time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0 % annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario

- USD 10 000 is invested

	If you exit after 1 year	If you exit after 7 years
Total costs	USD 1 063	USD 4 876
Annual cost impact (*)	10.6%	3.8% each year

We may share part of the costs with the person selling you the product to cover the services they provide to you. They will inform you of the amount.
